SUMMARY

Full-Stack Engineer with 4+ years shipping production web platforms, APIs, and cloud-native infrastructure end-to-end. Startup-forged generalist: built React / Node.js / TypeScript and Python (FastAPI / Django) systems, owned Kubernetes and AWS infrastructure plus Keycloak-based auth, and architected data layers processing 10M+ messages/day. Currently building enterprise agentic-AI platforms at scale (500+ agents, 1M+ requests/day) with strong security and governance.

TECHNICAL SKILLS

- **Languages:** TypeScript, Python, Golang, JavaScript, SQL, Bash
- **Frontend:** React.js, Three.js, JavaScript (ES6+), HTML/CSS, responsive UI
- **Backend & APIs:** Node.js, FastAPI, Django, Express, RESTful APIs, NGINX, WebSockets, event-driven architecture
- **Databases:** PostgreSQL, MongoDB, Redis, Redis Sentinel, TypeORM
- **Cloud & DevOps:** AWS (EC2, S3, SQS, EKS, ALB, API Gateway, Cognito), Docker, Kubernetes, Helm, GitHub Actions, CI/CD
- **Auth & Security:** Keycloak, OAuth 2.0, JWT, MFA, SSO, OPA policy
- **Observability:** Grafana, Loki, Tempo, Prometheus, Promtail
- **AI / Agentic (applied):** LLM gateway design, multi-agent orchestration, RAG, AgentScope, LangChain, LangGraph, LiteLLM

EXPERIENCE

- **Mphasis** Bangalore, India
Feb 2026 - Present
 - **ATOM – Enterprise Agentic Platform:** *TypeScript, Golang, FastAPI, React, Kubernetes, Kafka (Redpanda), OPA, PostgreSQL, Redis*
Architected and shipped a multi-tenant platform for BFSI clients – TypeScript/Golang/FastAPI services, a web Studio UI, and a policy gateway (auth, OPA, rate-limiting, immutable audit log) – now running 500+ agents at 1M+ requests/day. Includes AEGIS, a security layer that red-teams agents (prompt injection, jailbreak, goal-hijacking) and enforces PCI-DSS/GDPR/DORA guardrails.
 - **NexusAI – Enterprise LLM Gateway:** *LiteLLM, FastAPI, Python, PostgreSQL, Redis, Docker*
Architected a multi-tenant gateway with API-key management, per-tenant budget governance, PII-aware routing, and audit logging across multiple model providers.
- **IHX – A Perfios Company** Bangalore, India
Jul 2024 - Feb 2026
 - **Persistence Engine:** *TypeScript, TypeORM, PostgreSQL, Redis*
Architected a single-layer persistence solution that reduced average query time from 1–2s to 10–15ms across 10 tables, materially improving throughput and scalability.
 - **Status Notification Service:** *TypeScript, AWS SQS, AWS SNS, MongoDB*
Built a high-throughput system processing 10M+ messages/day to track state across AI/ML entities, surfacing unified real-time status to clients through dashboards.
 - **Workflow Orchestration Engine:** *Netflix Conductor, Zookeeper, Redis Sentinel, TypeScript*
Architected orchestration for document-processing pipelines (extraction, OCR, classification, QC) with parallel processing patterns, cutting processing time 40% and improving reliability.
 - **Document Intelligence Platform:** *TypeScript, FastAPI, AWS EKS, MongoDB, S3*
Built the document-processing platform for India's largest health benefits administrator, lifting first-instance complete claim submissions from 23% to 77% within 2 weeks. The platform now classifies 4M+ medical images every month.
 - **Platform Infrastructure & Security (End-to-End Ownership):** *Kubernetes, Helm, NGINX, AWS, Grafana, Loki, Prometheus, Promtail, Keycloak, OAuth 2.0, JWT*
As an early engineer at a startup, owned infrastructure and access control end-to-end: designed Kubernetes/Helm scaling and hardening for AI-model serving, stood up the full observability stack, and built a Keycloak-based MFA/SSO solution with custom plugins, cutting login time 50%.

PROJECTS

- **Collaborative Compiler – Real-Time Collaborative Code Editor (JavaScript, WebSockets):** Web-hosted collaborative code editor supporting real-time multi-user editing and autocomplete, architected and built by hand before AI coding assistants existed. github.com/shreyasY2k/Collaborative-Compiler
- **Praxis – Open-Source Agentic Runtime (TypeScript, Golang, FastAPI):** Personal open-source platform for running compliant AI agents on-premises: SDK-authored agents, single-command deploy, a policy gateway (auth / OPA / rate-limits / audit log), isolated containers on Docker/Kubernetes, and a Studio UI with human-in-the-loop management. (*Public repo link to be added.*)
- **Contra – AI-Assisted 3D Game (Three.js):** Built a complete 3D run-and-gun shooter in 2 hours using AI tooling (GitHub Copilot, Claude), with enemy AI, vehicle physics, and weapon/particle systems. shreyasy2k.github.io/contra
- **Python Spawn (Node.js, npm package):** NPM package bridging Node.js and Python, enabling execution of Python scripts and functions from Node.js applications. github.com/shreyasY2k/python-spawn

EDUCATION

- **Sapthagiri College of Engineering** Bangalore, India
B.E., Information Science; CGPA: 8.5 *2018 - 2022*

TECHNICAL WRITING & CERTIFICATIONS

- **Technical Writing:** Multi-part series on Keycloak MFA/SSO (custom plugins, SMS/Email/TOTP/Telegram, centralized user management) – medium.com/@shreyasmk.mathur
- **Certifications:** Architecting with Google Compute Engine (Coursera Specialization); The Modern JavaScript Bootcamp (Udemy)
